Proceedings of the 3rd IWSEE: Foreword

On March 30, 1996, the final day of the International Software Engineering Week at Berlin, Germany, a truly international group of people will meet for the **3rd International Workshop on Software Engineering Education**. The first one was held at Sorrento (1994), the second one at Seattle (1995).

From 25 submissions for the workshop, the program committee has selected 14 papers, which are printed in this volume of “Softwaretechnik-Trends”:

Session A (J.H. Cross, M. Glinz, D. Weber-Wulff, J. Verner)
Methods and Tools in Software Engineering Education: None, one, or many?

Session B (J. Prey, S. Easterbrook, J.J.van Amstel)
Software Engineering at the University: Within or without Computer Science?

Session C (J. Gorski, H. Saiedian, M.J. Oudshoorn)
Projects in a Software Engineering Curriculum

Session D (K.L. Nance, K. Bothe, M. Brunner, A. Rösel)
Specific Projects in Software Engineering

The members of the program committee were: Laurie Werth, University of Texas at Austin, U.S.A., Pankaj Jalote, I.I.T., Kanpur, India, Anthony Finkelstein, City University, London, Great Britain and Jochen Ludewig, University of Stuttgart, Germany (chairing).

Many thanks to those who have submitted papers, or even final versions, to the members of the program committee, to Patricia Mandl-Striegnitz who did all the work, and, last but certainly not least, to the editors of this magazine who dedicated most of this volume for our proceedings!

Stuttgart, February 1996 Jochen Ludewig
