Call for Papers

REFraming Elicitation

REFrame

2ⁿᵈ International Workshop on Requirements Engineering Frameworks

at the IEEE Requirements Engineering Conference RE 2023

04 September 2023, Hannover, Germany

What do we know about requirements elicitation frameworks? How can we provided guidance?

Main objective of the workshop is to **investigate and discuss requirements elicitation frameworks (e.g., techniques, methods, and practices)**. So, the key concepts addressed in the workshop are software requirements frameworks and requirements elicitation:

The workshop understands a framework as a structure for a topic area that collects elements of the topic area and relates them to each other. A framework is semi-complete and must be supplemented and/or adapted context-specifically for a concrete application.

Elicitation is the process of seeking, capturing, and consolidating requirements from available sources, potentially including the re-construction or creation of requirements.

Over time, as software and software engineering (SE) processes have evolved, **the challenges of elicitation and the techniques and methods used have evolved**, too. **The workshop aims at understanding better what elicitation means today and how it needs to improve in the future.**

In this sense the workshop will also consider the main theme of RE 2023: "Redefining RE: Challenging RE Perceptions, Boundaries, and Topics". At best, it will provide a vivid illustration of what this theme can mean specifically to the field of requirements elicitation.

Workshop Questions

Specific questions that the workshop wants to address include but are not limited to:

- What are important characteristics of state-of-the-art requirements engineering frameworks?
- What can we learn from comparing requirements elicitation frameworks?
- How have requirements engineering frameworks evolved over time?
- How can a compendium of requirements elicitation frameworks be constructed?

Important Dates

Submissions due: Friday, 09 June 2023

Notification of acceptance: Friday, 07 July 2023

Workshop date: Monday, 04 September 2023
